1. Brief
    a. My project is essentially a form of tracking your thoughts on music albums that you've listened to. You can see all the reviews you have created in the main list screen, in which you can also click on a settings button to pull up the settings screen and on the plus button to add a new review. The settings screen is a single slider that turns dark mode on and off. The addNewReviewScreen has spaces to write in album name, artist name, a slider for a numerical ranking, and a space for a longer written review. There is also a screen that shows more details about individual reviews if you click on them in the list screen.
